

FEATURES

• **Compact, high-capacity, and resistant to inductive loads**

It can control an inductive load with inrush current of 80 A and steady state current of 20 A.

• **Excellent contact welding resistance**

High contact pressure, a forced opening mechanism, and a forced wiping mechanism realizes an excellent contact welding resistance.

• **High breakdown voltage and surge resistant relay**

More than 6.4 mm .252 inch maintained for the insulation distance between contacts and coil, and the breakdown voltage between contacts and coil is 5,000 V for 1 minute. In addition, the surge resistance between contacts and coil is greater than 10,000 V.

• **Resistant to external force**

An absorber mechanism is used on the load terminals, giving a large improvement in characteristics variations caused by the external force during FASTON placement/removal.

• **Flux resistance mechanism**

The terminal area is plugged with resin to prevent flux seepage during PCB mounting. (TMP type)

• **Conforms to the various safety standards**

UL, CSA, VDE and TÜV available

• **The line up can support economical mounting methods.**

The relay are equipped with a drive terminal (coil terminal) on one side for PCBs, and a load terminal (tab terminal #250) on the reverse side. The line up includes the TM type which can be attached directly to the PCB composing a drive circuit, and the TMP type which supports economical wiring. The TMP type can also be directly attached, and a high capacity load can be wired to the tab terminal.

About Cd-free contacts

We have introduced Cadmium free type products to reduce Environmental Hazardous Substances.

(The suffix "F" should be added to the part number)

Please replace parts containing Cadmium with Cadmium-free products and evaluate them with your actual application before use because the life of a relay depends on the contact material and load.
