ED Series

The ED series filters are more effective than general-purpose filters in applications where line-to-line and low-frequency line-to-ground noise must be controlled; for example, to bring equipment into compliance with FCC conducted emissions standards.

The ED series offers significantly higher performance than comparably sized filters, especially at high frequencies, yet is in the EF series package which incorporates the IEC power line connector. Models ED1, ED1C, and ED2 have .250" terminals on load side; ED4, ED4C, ED8, and ED8C have wire leads.

Models 6ED1C, 10ED1C, 6ED4C, and 6ED8C additionally incorporate a separate ground-circuit inductor to isolate the equipment chassis from power line ground at RF frequencies.
