Model 1579
Broadband Resistive Power Splitter
(Matching), 3.5mm Connectors

## Features

These resistive power splitters are intended for RF and wireless applications in which one of the two outputs is included in a leveling loop or is used as a reference in a ratio system, for the purpose of providing an output signal whose source impedance is essentially matched to $50 \Omega$. Some examples are:
// A dual channel insertion loss measuring system (ratio).
// A parallel IF substitution insertion loss measuring system (ratio or ALC loop).
// A precision power source (ratio or ALC loop).
