Through Hole Lamp LTL-R42M12NH51

1. Description

CBI (Circuit Board Indicator) is a black plastic right angle Holder (Housing) which mates with Lite-On LED lamps. Lite-On CBI is available in a wide variety of packages, including top-view (Spacer) or right angle and horizontal or vertical arrays which is stackable and easy to assembly.

1.1. Features

- Designed for ease in circuit board assembly.
- Black case enhance contrast ratio.
- Low power consumption & High efficiency.
- Lead free product & RoHS Compliant.
- T-1 lamp: emitted colors are red/green, yellow green and InGaN blue color.

1.2. Applications

- Computer
- Communication
- Consumer
- Industrial

2. Outline Dimensions

Notes :

1. All dimensions are in millimeters (inches).
2. Tolerance is $\pm 0.25\text{mm}$ (.010") unless otherwise noted.
3. The Holder (Housing) material is plastic black.
4. LED1 is red/yellow bi-color with white diffused Lens; LED2,3 are yellow green color with green diffused Lens; LED4 is blue color with white diffused Lens.
5. Specifications are subject to change without notice.

Through Hole Lamp LTL-R42M12NH51

3. Absolute Maximum Ratings at TA=25°C

Parameter	Red	Yellow	Yellow Green	Blue	Unit
Power Dissipation	52	52	52	117	mW
Peak Forward Current (Duty Cycle $\leq 1/10$, Pulse Width ≤ 0.1 ms)	60	60	60	100	mA
DC Forward Current	20	20	20	20	mA
Operating Temperature Range	-40°C to + 85°C				
Storage Temperature Range	-40°C to + 100°C				
Lead Soldering Temperature [2.0mm (.079") From Body]	260°C for 5 Seconds Max.				

4. Electrical / Optical Characteristics at TA=25°C

Parameter	Symbol	Color		Min.	Typ.	Max.	Unit	Test Condition			
		LED1	LED2,3; LED4								
Luminous Intensity	IV	Red	Yellow	50	110	240	mcd	LED1,4 IF=20mA LED2,3 IF=10mA Note 1,4			
		Green	Blue	8.7	180	19			400	50	880
Viewing Angle	2 θ 1/2	Red	Yellow			100	deg	Note 2 (Fig.6)			
		Green	Blue			100			60		
Peak Emission Wavelength	λ P	Red	Yellow			632	591	nm	Measurement @Peak (Fig.1)		
		Green	Blue			572	468				
Dominant Wavelength	λ d	Red	Yellow	617	583	624	589	632	596	nm	LED1,4 IF=20mA LED2,3 IF=10mA Note 3
		Green	Blue	566	460	569	470	574	475		
Spectral Line Half-Width	$\Delta\lambda$	Red	Yellow			20		nm			
		Green	Blue			15	20				
Forward Voltage	VF	Red	Yellow			2.1		2.6	V	LED1,4 IF=20mA LED2,3 IF=10mA	
		Green	Blue			2.0	3.2	2.6			3.8
Reverse Current	IR	Red	Yellow					100	μ A	VR = 5V, Note 6	
		Green	Blue								

NOTE:

- Luminous intensity is measured with a light sensor and filter combination that approximates the CIE eye-response curve.
- θ 1/2 is the off-axis angle at which the luminous intensity is half the axial luminous intensity.
- The dominant wavelength, λ d is derived from the CIE chromaticity diagram and represents the single wavelength which defines the color of the device.
- Iv guarantee must be included with $\pm 30\%$ testing tolerance.
- Reverse current is controlled by dice source.
- Reverse voltage (VR) condition is applied for IR test only. The device is not designed for reverse operation.

7. CAUTIONS

7.1. Application

This LED lamp is good for application of indoor and outdoor sign, also ordinary electronic equipment.

7.2. Storage

The storage ambient for the LEDs should not exceed 30°C temperature or 70% relative humidity. It is recommended that LEDs out of their original packaging are used within three months. For extended storage out of their original packaging, it is recommended that the LEDs be stored in a sealed container with appropriate desiccant or in desiccators with nitrogen ambient.

7.3. Cleaning

Use alcohol-based cleaning solvents such as isopropyl alcohol to clean the LEDs if necessary.

7.4. Lead Forming & Assembly

During lead forming, the leads should be bent at a point at least 3mm from the base of LED lens. Do not use the base of the lead frame as a fulcrum during forming. Lead forming must be done before soldering, at normal temperature. During assembly on PCB, use minimum clinch force possible to avoid excessive mechanical stress.

7.5. Soldering

When soldering, leave a minimum of 2mm clearance from the base of the lens/Holder to the soldering point. Dipping the lens/Holder into the solder must be avoided. Do not apply any external stress to the lead frame during soldering while the LED is at high temperature.

Recommended soldering conditions:

Soldering iron		Wave soldering	
Temperature	350°C Max.	Pre-heat	120°C Max.
Soldering time	3 seconds Max. (one time only)	Pre-heat time	100 seconds Max.
Position	No closer than 2mm from the base of the epoxy bulb	Solder wave	260°C Max.
		Soldering time	5 seconds Max.
		Dipping Position	No lower than 2mm from the base of the epoxy bulb

Note: Excessive soldering temperature and/or time might result in deformation of the LED lens or catastrophic failure of the LED.

7.6. Drive Method

An LED is a current-operated device. In order to ensure intensity uniformity on multiple LEDs connected in parallel in an application, it is recommended that a current limiting resistor be incorporated in the drive circuit, in series with each LED as shown in Circuit A below.

Circuit model (A)

(A) Recommended circuit

Circuit model (B)

(B) The brightness of each LED might appear different due to the differences in the I-V characteristics of those LEDs.

Through Hole Lamp LTL-R42M12NH51

7.7. ESD (Electrostatic Discharge)

Static Electricity or power surge will damage the LED.

Suggestions to prevent ESD damage:

- Use a conductive wrist band or anti- electrostatic glove when handling these LEDs
- All devices, equipment, and machinery must be properly grounded
- Work tables, storage racks, etc. should be properly grounded
- Use ion blower to neutralize the static charge which might have built up on surface of the LEDs plastic lens as a result of friction between LEDs during storage and handling

Suggested checking list:

Training and Certification

- 7.7.1.1. Everyone working in a static-safe area is ESD-certified?
- 7.7.1.2. Training records kept and re-certification dates monitored?

Static-Safe Workstation & Work Areas

- 7.7.2.1. Static-safe workstation or work-areas have ESD signs?
- 7.7.2.2. All surfaces and objects at all static-safe workstation and within 1 ft measure less than 100V?
- 7.7.2.3. All ionizer activated, positioned towards the units?
- 7.7.2.4. Each work surface mats grounding is good?

Personnel Grounding

- 7.7.3.1. Every person (including visitors) handling ESD sensitive (ESDS) items wear wrist strap, heel strap or conductive shoes with conductive flooring?
- 7.7.3.1. If conductive footwear used, conductive flooring also present where operator stand or walk?
- 7.7.3.2. Garments, hairs or anything closer than 1 ft to ESD items measure less than 100V*?
- 7.7.3.3. Every wrist strap or heel strap/conductive shoes checked daily and result recorded for all DLs?
- 7.7.3.4. All wrist strap or heel strap checkers calibration up to date?

Note: *50V for Blue LED.

Device Handling

- 7.7.4.1. Every ESDS items identified by EIA-471 labels on item or packaging?
- 7.7.4.2. All ESDS items completely inside properly closed static-shielding containers when not at static-safe workstation?
- 7.7.4.3. No static charge generators (e.g. plastics) inside shielding containers with ESDS items?
- 7.7.4.4. All flexible conductive and dissipative package materials inspected before reuse or recycle?

Others

- 7.7.5.1. Audit result reported to entity ESD control coordinator?
- 7.7.5.2. Corrective action from previous audits completed?
- 7.7.5.3. Are audit records complete and on file?
