3.3-3.8 GHz WiMAX Power Amplifier (3x3mm)

## Data Sheet

### Description

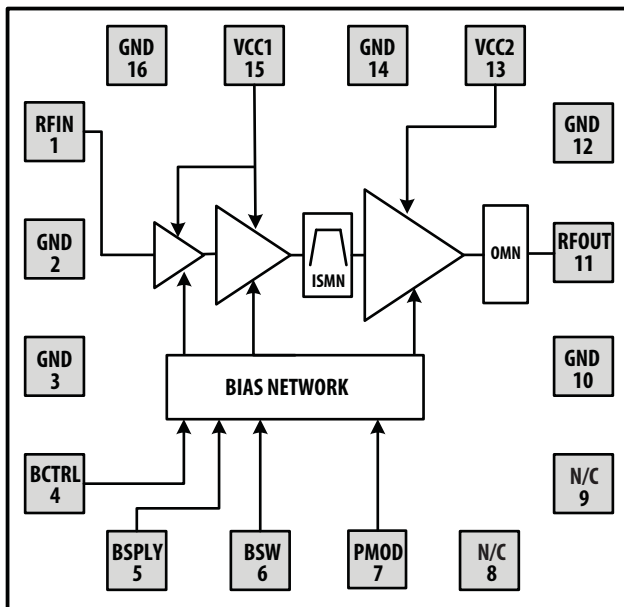

Avago Technologies MGA-23003 linear power amplifier is designed for mobile and fixed wireless data applications in the 3.3 to 3.8 GHz frequency ranges. The PA is optimized for IEEE 802.16 WiMAX modulation but can be used for any high linearity applications. The PA exhibits flat gain and good match while providing linear power efficiency to meet stringent mask conditions. It utilizes Avago Technologies proprietary GaAs Enhancement-mode pHEMT technology for superior performance across voltage and temperature levels.

The MGA-23003 is packaged in a 3x3x1 mm size for space-constrained applications.

Recommended turn on sequence

- Apply VCC1 and VCC2
- Apply BSPLY
- Apply BCTRL
- Apply BSW
- For HPM Apply PAMOD HI for LPM Apply PAMOD LO
- Apply RF In not to exceed 15dBm

Turn off in reverse order

**Table 5. Typical Test Conditions**

Pin	HPM	LPM	
VCC1,2	3.3V	3.3V	Supply Voltage
PAMOD	1.8V	0V	Low Power Mode
B_SPLY	3.3V	3.3V	Bias Voltage
B_CTRL	2.8V	2.8V	Bias Control
B_SW	1.8V	1.8V	PA Enable

Notes: VCC1, VCC2 and B\_SPLY can be tied together to reduce supply voltages, but B\_CTRL needs to be a regulated voltage which is optimized for 2.8V.

## Application Circuit MGA-23003

### Using 3.3V or 5V Supply and tying Vcc1, Vcc2, BSPLY and BCTRL

Notes: BCTRL regulates the device current, thus R1 and R2 should have good tolerance rating. If available, a voltage regulator is the preferred method of bias.

In this example we set R2 at 40KOhm and solve for R1 with simple voltage divider equation. Note this method will cause some leakage current through R2.

#### 3.3V Example :

$$V_{BCTRL} = \frac{R_2}{R_1 + R_2} * V_{BATT}$$

$$2.8V = \frac{40K\Omega}{R_1 + 40K\Omega} * 3.3V$$

$$R_1 = 7K\Omega$$

$$R_2 = 40K\Omega$$

#### Given :

$$V_{BCTRL} = 2.8V$$

$$V_{BAT} = 3.3V$$

$$R_2 = 40K\Omega$$

$$R_1 = ?$$

#### 5.0V Example :

$$V_{BCTRL} = \frac{R_2}{R_1 + R_2} * V_{BATT}$$

$$2.0V = \frac{20K\Omega}{R_1 + 20K\Omega} * 5.0V$$

$$R_1 = 30K\Omega$$

$$R_2 = 20K\Omega$$

#### Given :

$$V_{BCTRL} = 2.0V$$

$$V_{BAT} = 5.0V$$

$$R_2 = 20K\Omega$$

$$R_1 = ?$$
