

1.0A Adjustable Voltage High Speed LDO Regulators ME1117 Series

General Description

ME1117 series are highly accurate, low noise, LDO Voltage Regulators that are capable of providing an output current that is in excess of 1.0A with a maximum dropout voltage of 1.3V at 1.0A. This series contains six fixed output voltages of 1.2 V, 1.5V, 1.8 V, 2.5 V, 3.3 V, and 5.0 V that have no minimum load requirement to maintain regulation. Also included is an adjustable output version that can be programmed from 1.25 V to 20 V with two external resistors. On chip trimming adjusts the reference/output voltage to within $\pm 2.0\%$ accuracy. Internal protection features consist of output current limiting, safe operating area compensation, and thermal shutdown. The ME1117 series can operate with up to 20 V input.

Typical Application

- Consumer and Industrial Equipment Point of Regulation
- Switching Power Supply Post Regulation
- Hard Drive Controllers
- Battery Chargers

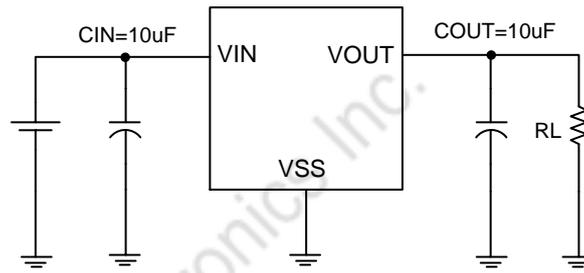

Features

- Output Current in Excess of 1.0A
- Dropout Voltage: 1.07V@ $I_{OUT} = 100\text{mA}$
- Operating Voltage Range:
4.8V~20V (ME1117A33)
- Highly Accuracy: $\pm 2\%$
- Adjustable Output Voltage Option
- Standby Current: 3.3mA (TPY.)
- High Ripple Rejection: 60dB@1KHz
(ME1117A33)
- Line Regulation: 0.1% (TYP.)
- Temperature Stability $\leq 0.5\%$
- Current Limit (1.3A)
- Thermal Shutdown Protection (160°C)

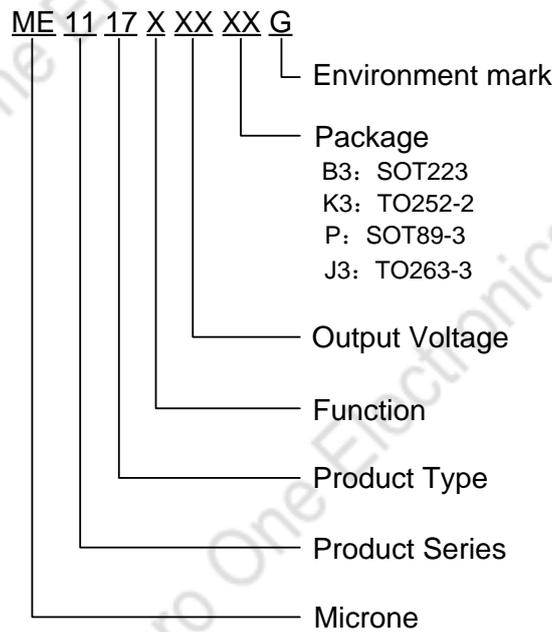

Package

- 3-pin SOT223、TO252-2、SOT89-3、TO263-3

Typical Application Circuit

Selection Guide

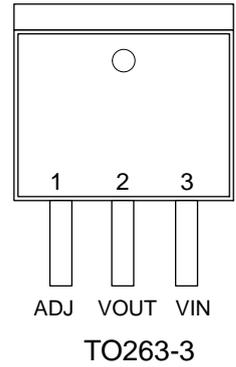

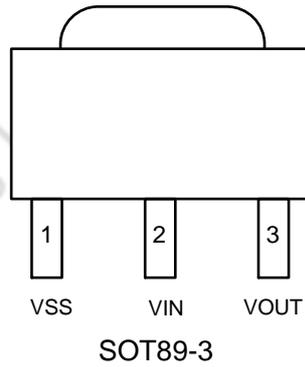

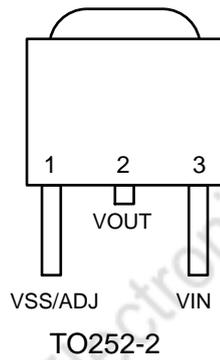

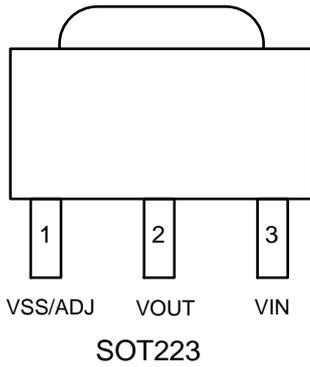

| product series | product description |
|----------------|-------------------------------------|
| ME1117A15B3G | $V_{OUT} = 1.5V$; Package: SOT223 |
| ME1117A18B3G | $V_{OUT} = 1.8V$; Package: SOT223 |
| ME1117A25B3G | $V_{OUT} = 2.5V$; Package: SOT223 |
| ME1117A33B3G | $V_{OUT} = 3.3V$; Package: SOT223 |
| ME1117A33K3G | $V_{OUT} = 3.3V$; Package: TO252-2 |
| ME1117A33PG | $V_{OUT} = 3.3V$; Package: SOT89-3 |
| ME1117A50B3G | $V_{OUT} = 5.0V$; Package: SOT223 |
| ME1117A50K3G | $V_{OUT} = 5.0V$; Package: TO252-2 |
| ME1117FB3G | $V_{FB} = 1.25V$; Package: SOT223 |
| ME1117FJ3G | $V_{FB} = 1.25V$; Package: TO263-3 |
| ME1117FK3G | $V_{FB} = 1.25V$; Package: TO252-2 |

NOTE: At present ,there are seven kinds of voltage value:1.2V、1.25V (VFB)、1.5V、1.8V、2.5V、3.3V、5.0V。

If you need other voltage and package, please contact our sales staff.

Pin Configuration

Pin Assignment

ME1117A

| Pin Number | | Pin Name | Functions |
|----------------|---------|-----------|-------------|
| SOT223、TO252-2 | SOT89-3 | | |
| 1 | 1 | V_{SS} | Ground |
| 2 | 3 | V_{OUT} | Output |
| 3 | 2 | V_{IN} | Power Input |

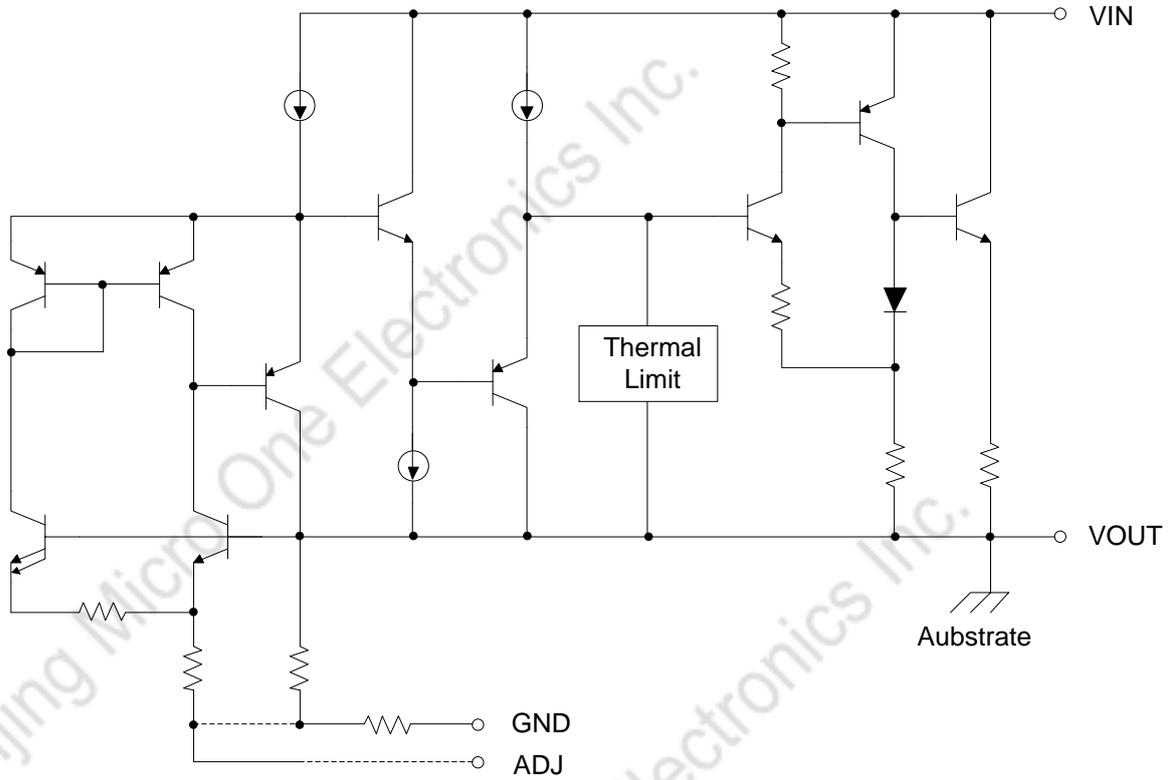

ME1117F

| Pin Number | Pin Name | Functions |
|------------------------|-----------|-------------------|
| SOT223、TO252-2、TO263-3 | | |
| 1 | ADJ | Adjustable Output |
| 2 | V_{OUT} | Output |
| 3 | V_{IN} | Power Input |

Absolute Maximum Ratings

| Parameter | | Symbol | Ratings | Units |
|---|---------|---------------|--------------------------------|-------|
| Input Voltage | | V_{IN} | 20 | V |
| Output Current | | I_{OUT} | 1.3 | A |
| Output Voltage | | V_{OUT} | $V_{SS}-0.3 \sim V_{IN} + 0.3$ | V |
| Power Dissipation | SOT223 | P_D | 1.8 | W |
| | TO252-2 | | 2.23 | W |
| | SOT89-3 | | 1.25 | W |
| | TO263-3 | | 2.98 | W |
| Operating Temperature Range | | T_{OPR} | -40~+85 | °C |
| Storage Temperature Range | | T_{STG} | -55~+150 | °C |
| Junction Temperature Range | | T_J | -40~+150 | °C |
| Lead Temperature | SOT223 | T_{solder} | 260°C, 4sec | |
| | TO252-2 | T_{solder} | 260°C, 10sec | |
| | SOT89-3 | T_{solder} | 260°C, 10sec | |
| | TO263-3 | T_{solder} | 260°C, 10sec | |
| Thermal Resistance Junction-to-Ambient (No heat sink;No air flow) | SOT223 | θ_{JA} | 70 | °C/W |
| | TO252-2 | θ_{JA} | 56 | °C/W |
| | SOT89-3 | θ_{JA} | 100 | °C/W |
| | TO263-3 | θ_{JA} | 42 | °C/W |

| Thermal Shutdown | | Junction Temperature | | 160 | | °C |

Note : 1. V_{DIF} : $V_{IN1} - V_{OUT}(E)'$

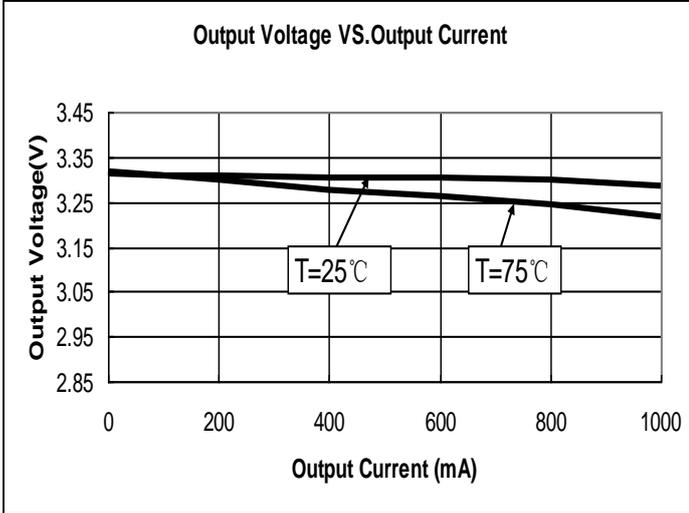

V_{IN1} : The input voltage when $V_{OUT}(E)'$ appears as input voltage is gradually decreased.

$V_{OUT}(E)'$ = A voltage equal to 99% of the output voltage whenever an amply stabilized I_{OUT} and $\{V_{OUT}(T) + 1.5V\}$ is input.

Applications Information

➤ Introduction

The ME1117 features a significant reduction in dropout voltage along with enhanced output voltage accuracy and temperature stability when compared to older industry standard three-terminal adjustable regulators.

➤ Output Voltage

The typical application circuit for adjustable output regulator is shown in following Figure. They develop and maintain the nominal 1.25 V reference voltage between the output and adjust pins. The reference voltage is programmed to a constant current source by resistor R1, and this current flows through R2 to ground to set the output voltage. The programmed current level is usually selected to be greater than the specified 3.0mA minimum that is required for regulation. Since the adjust pin current, I_{ADJ} , is significantly lower and constant with respect to the programmed load current, it generates a small output voltage error that can usually be ignored.

$$V_{out} = V_{ref} \left(1 + \frac{R2}{R1}\right) + I_{adj} R2$$

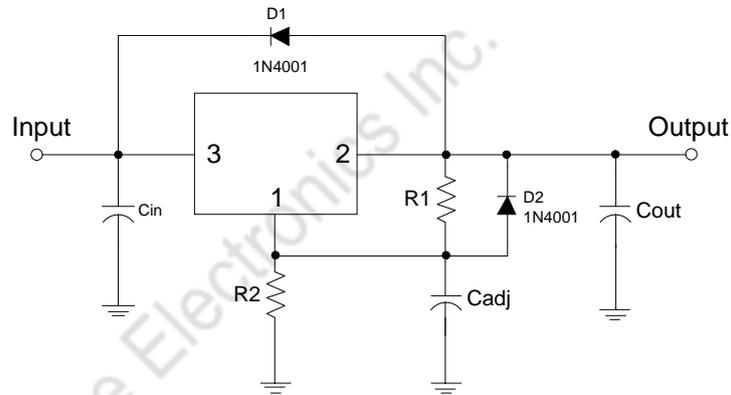

➤ External Capacitors

Input bypass capacitor C_{IN} may be required for regulator stability. This capacitor will reduce the circuit's sensitivity when powered from a complex source. A 10uF ceramic or tantalum capacitor should be adequate for most applications. Frequency compensation for the regulator is provided by capacitor C_{OUT} and its use is mandatory to ensure output stability. A minimum capacitance value of 4.7uF with an equivalent series resistance (ESR) that is within the limits of 0.25 ohm to 2.2 ohm is required. Higher values of output capacitance can be used to enhance loop stability and transient response with the additional benefit of reducing output noise. The output ripple will increase linearly for fixed and adjustable devices as the ratio of output voltage to the reference voltage increases.

➤ Protection Diodes

The ME1117 has two internal low impedance diode paths that normally do not require protection when used in the typical regulator applications. The first path connects between V_{OUT} and V_{IN} , and it can withstand a peak surge current of about 15 A. Only when V_{IN} is shorted to ground and C_{OUT} is greater than 100uF, it becomes possible for device damage to occur. Under these conditions, diode D1 is required to protect the device. The second path

connects between CADJ and VOUT, and it can withstand a peak surge current of about 150mA. Protection diode D2 is required if the output is shorted to ground and CADJ is greater than 10uF.

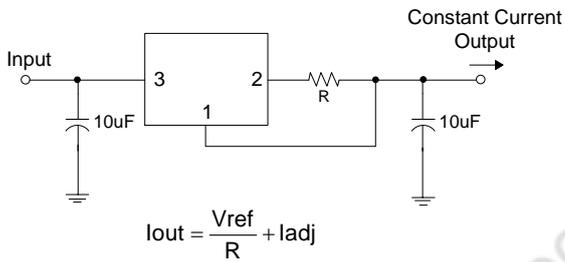

➤ Thermal Considerations

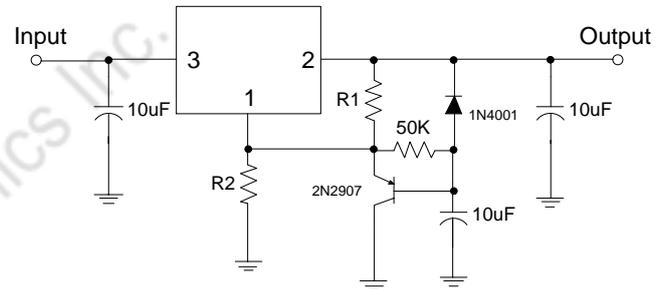

This series contains an internal thermal limiting circuit that is designed to protect the regulator in the event that the maximum junction temperature is exceeded. When activated, typically at 175°C, the regulator output switches off and then back on as the die cools.

Other Application Circuit

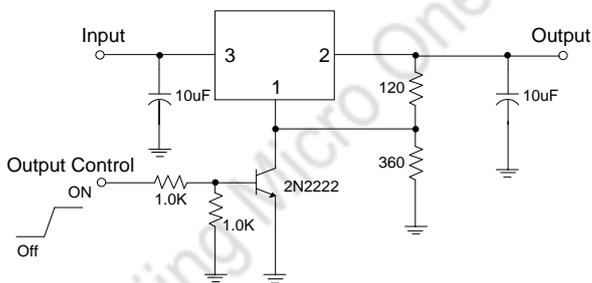

(1) Constant Current Regulator

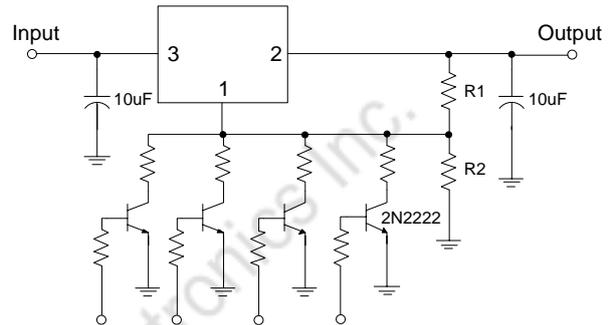

(2) Slow Turn-On Regulator

(3) Regulator with Shutdown

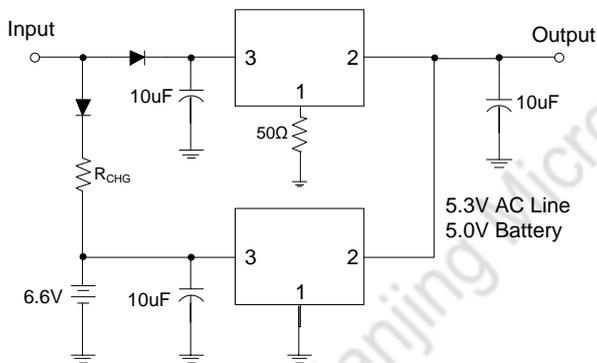

(4) Digitally Controlled Regulator

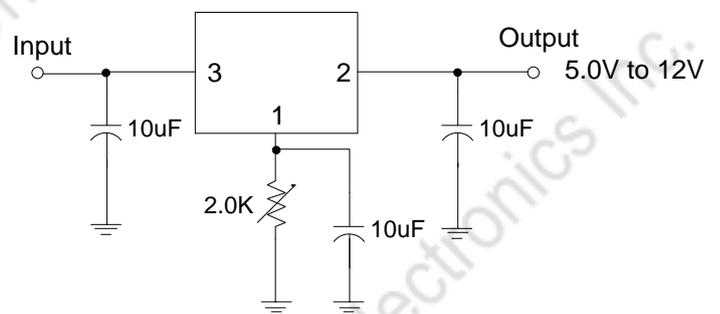

Resistor R2 sets the maximum output voltage. Each transistor reduces the output voltage when turned on.

(5) Battery Backed-Up Power Supply

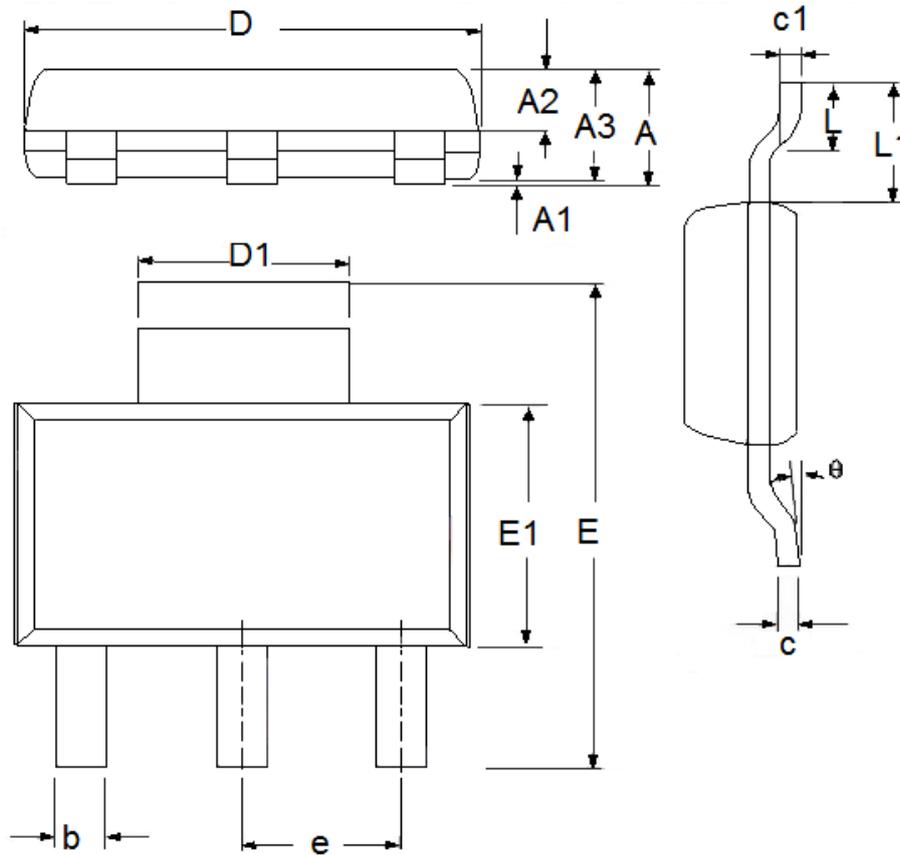

(6) Adjusting Output of Fixed Voltage Regulators

The 50 ohm resistor that is in series with the ground pin of the upper regulator level shifts its output 300 mV higher than the lower regulator. This keeps the lower regulator off until the input source is removed.

- The contents of this document will be updated with the product's improvement without prior notice. Please consult our sales staff before using this document to ensure that you are using the latest version.
- The application circuit examples described in this document are only used to indicate the representative use of the product and do not guarantee the design of mass production.
- Please use this product within the limits stated in this document. We will not be responsible for any damage caused by improper use.
- The products described in this document are not allowed to be used in equipment or devices that affect the human body without the written permission of our company, including but not limited to: health equipment, medical equipment, disaster prevention equipment, fuel control equipment, automobile equipment, aviation equipment and vehicle equipment.
- Although our company has always been committed to improving product quality and reliability, semiconductor products have a certain probability of malfunction or wrong work. To prevent personal injury or property damage caused by such accidents, please pay full attention to safety design, for example: Alternate design, fire protection design, and prevention of wrong action design.
- When exporting this product or this document overseas, you should abide by applicable import and export control laws.
- Copying or reprinting part or all of this document in any form without the permission of our company is strictly prohibited.
