2	2		2	HE2B-M222PN1	1 个			
					HE2B-M222PN1PN10	1 盒(10 个)		

• 型号的 * 为橡胶套颜色记号。

□型号说明

□触点容量

额定绝缘电压 (Ui)		250V				
额定通电流 (Ith)		3A				
额定使用电压 (Ue)		30V	125V	250V		
额定使用电流 (Ie)	3 位置开关	AC	电阻性负载 (AC-12)	-	1A	0.5A
			电感性负载 (AC-15)	-	0.7A	0.5A
	DC	电阻性负载 (DC-12)	1A	0.2A	-	
		电感性负载 (DC-13)	0.7A	0.1A	-	
	复位辅助开关 按压辅助开关 (NC 触点)	AC	电阻性负载 (AC-12)	-	2.5A	1.5A
			电感性负载 (AC-15)	-	1.5A	0.75A
DC	电阻性负载 (DC-12)	2.5A	1.1A	0.55A		
	电感性负载 (DC-13)	2.3A	0.55A	0.27A		
触点结构		3 位置开关	2 触点			
		按钮复位辅助开关	0 ~ 2 触点			
		按钮按压辅助开关	0 ~ 2 触点			

- 最小对应负载 (参考值) = 5V AC/DC · 1mA (3 位置开关)
3V AC/DC · 5mA (辅助开关)
(可使用的范围取决于使用条件和负载类型。)
- 认证额定值

	TÜV	UL
3 位置开关	AC-12 250V/0.5A DC-12 30V/1A DC-13 30V/0.7A	250V AC/0.5A Resistive 30V DC/1A Resistive DC-13 30V/0.7A Pilot Duty
辅助开关	AC-15 250V/0.5A AC-15 250V/0.75A DC-13 125V/0.22A DC-13 30V/2.3A	250V AC/0.5A Pilot Duty 250V AC/0.75A Pilot Duty 125V DC/0.22A Pilot Duty

□性能规格

对应标准	IEC/EN60947-5-8 (TÜV) IEC/EN60947-5-1 JIS C8201-5-1 UL508 (UL recognized) CSA C22.2 No. 14 (c-UL recognized) GB14048.5 (CCC)	
应用标准	ISO12100/EN ISO12100 IEC60204-1/EN60204-1 ISO11161/EN ISO11161 ISO10218-1/EN ISO10218-1 ANSI/RIA/R15.06、ANSI B11.19 ISO13849-1/EN ISO13849-1	
标准使用状态	使用环境温度： - 25 ~ + 60°C (无结冰) (橡胶套材料：无橡胶套 / 矽胶时) - 10 ~ + 60°C (无结冰) (橡胶套材料：NBR/PVC 高分子混合物 (Polyblend) 时) 相对湿度：45 ~ 85% RH (无结露) 保存环境温度：- 40 ~ + 80°C (无结冰) 使用环境：污染等级 2 (面板内部 / 端子侧) 3 (面板外部 / 操作部侧)	
接触电阻	50mΩ 以下 (初始值)	
绝缘电阻	带电部与不带电金属部间：100MΩ 以上 (500V DC 兆欧表) 异极带电部：100MΩ 以上 (500V DC 兆欧表)	
脉冲耐电压	2.5kV	
切换频率	1,200 次 / 小时	
机械耐久性	位置 1 → 2 → 1 : 100 万次以上 位置 1 → 2 → 3 → 1 : 10 万次以上	
电气耐久性	10 万次以上	
抗冲击性	误动作	150m/s ²
	耐久性	1,000m/s ²
耐振动	误动作	5 ~ 55Hz、单振幅 0.5mm
	耐久性	16.7Hz、单振幅 1.5mm
端子形状	焊接端子	
适用电线	0.5mm ² 以下 / 1 根	
端子部焊接条件	310 ~ 350°C、3 秒以下	
端子抗拉强度	20N 以上	
安装螺丝推荐拧紧扭矩	0.5 ~ 0.8N · m	
保护等级	无橡胶套：IP40、附橡胶套：IP65	
条件性短路电流	50A (250V) (注)	
直接开路动作力	60N 以上 (辅助开关)	
直接开路动作行程	1.7mm 以上 (复位辅助开关) 4.7mm 以上 (按压辅助开关)	
操作部强度	500N 以上 (按钮全面按压)	
重量 (约)	26g (无橡胶套)、30g (附橡胶套)	

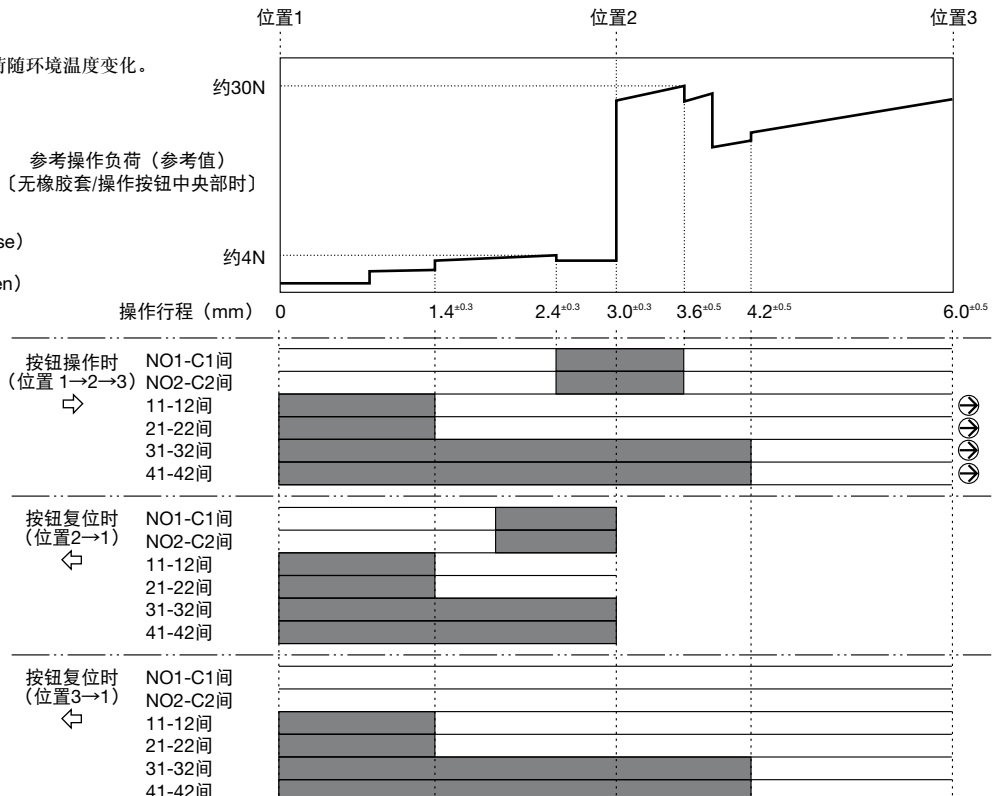

注：请使用 250V/10A 速断型保险丝作为短路保护装置。

□动作特性图

注：附橡胶套时，操作负荷随环境温度变化。

参考操作负荷 (参考值)
(无橡胶套/操作按钮中央部时)

■ : ON (Close)
□ : OFF (Open)

• 由“位置 2”至“位置 3”按压时的操作负荷可以变更。详细内容请咨询 IDEC。

□附件

• 橡胶套

请按订购型号订购

橡胶套材料 / 颜色	订购型号	最小起订数量	盒装表示型号
矽胶 / Y (黄色)、B (黑色)	HE9Z-D2*	1 盒 (10 个)	HE9Z-D2*PN10
NBR/PVC 高分子混合物 (Polyblend) / 灰色	HE9Z-D2N1	1 盒 (10 个)	HE9Z-D2N1PN10

- 型号的 * 为橡胶套颜色编码。
- 无橡胶套型 (HE2B-M200/M211/M222 型) 也可安装。

⚠ 安全注意事项

- 本产品为工业用产品。请勿用于住宅、商业、照明，以免引发无法预测的电磁障碍。请根据需要实施适宜的电磁障碍缓解措施。(IEC60947-1 5.3 项)
- 安装、拆卸、接线作业及维修检查时，请务必先切断电源，以免造成触电及火灾的危险。
- 请勿进行分解、改造本产品、以及故意停止使能开关性能的行为。
- 将使能开关用于控制系统的安全相关部时，请参照各国、各地区配合实际机械、设备用途所制定的安全标准与规范，正确使用。此外，请在使用前进行风险评估。
- 请切勿利用胶带、绑线等来保持位置2状态，使安全功能无效化。如此将失去使能开关原本的功能，相当危险。
- 请针对利用按钮按压 ON ⇒ OFF 的高操作负荷，请在使用状态下进行充分的风险评估。
- 请针对使能开关安装部的形状及结构，进行充分的风险评估，以防止意料之外的操作。(例如，手提式人机界面的外形若有突出物，可能会因人机界面本身的重量，而使操作产生危险性。)
- 安装处请确保针对预测的操作力拥有充分的强度。(利用按钮按压 ON ⇒ OFF 时，预测会产生特别强大的操作力。)
- 接线时，请使用适合施加电压、通电电流的电线尺寸，依上述接线时的注意事项，正确进行接线。若在焊接不完全的状态下使用，会造成异常发热，引起火灾的危险。
- 请在无过度冲击力的情况下使用。
- 请按使用说明书正确接线。
- 在进行多个安全元器件串行接线时，因故障检测功能低下，从而 ENISO13849-1 的性能等级也随之低下。
- 内装本产品的控制系统，须根据 ENISO13849-2 确认系统整体的妥当性。

使用注意事项

- 安装在手提式人机界面等中的使能开关，指在危险区域中进行机器人示教等的手动操作之际，仅在手动操作时，才允许机械动作的开关。请将机械的系统设定为仅在位置2时，才允许动作。
- 因作为高安全性系统的使能开关使用，因此3位置开关的2触点请输入不一致检测电路(安全继电器模块等)后再使用。(ISO13849-1/EN954-1)
- 2触点采各自独立动作的结构，因此操作按钮端部时，可能会产生2触点动作产生时间落差的情形。请勿施加过度的冲击。
- 若使附橡胶套型具备防水性能，必须去除橡胶套面板接触面上形成的突起物。橡胶套的突起若未去除，使安装面板侧产生歪斜，则将无法得到正常的防水性能，因此如有上述问题时，推荐采用下图所示的追加补强肋材。
- 使用附橡胶套型时，若针对橡胶套施加过度的拉伸力，则夹在开关与面板间的部分将会突出，从而降低防水性能，因此在有可能施加上述力时，推荐如下图所示，采用将补强材包覆住橡胶套的外周，使安装部分形成段差结构。

- 使用无橡胶套型时，为了防止按钮的动作不良，请追加保护构造。
- 根据使用环境、使用条件等橡胶套可能会产生劣化，若发生变形或龟裂等，请及时更换。

□安装注意事项

- 请保证安装用面板具备足够的强度，安装面板歪斜，将无法得到正常的防水性能。

□接线时注意事项

- 适用电线为 0.5mm² 以下 1 根。
- 请在 3 秒内(焊铁先端温度 310 ~ 350°C)快速焊接端子。请勿对自动焊接槽(浇注槽)或先端槽进行焊接。(使用非铅焊铁时推荐使用 Sn-Ag-Cu 型)
- 焊接时，请将焊铁尽可能远离元器件主体的树脂部。接线时请勿故意弯曲端子或施加外力牵拉电线。(使用时请用户按实际使用条件进行确认。)
- 助熔剂使用非腐蚀性的松香液

HE2B Double Three-position Enabling Switches

Specifications

Applicable Standards	IEC/EN60947-5-8 (TÜV approval), IEC/EN60947-5-1 UL508 (UL recognized), CSA C22.2 No. 14 (c-UL recognized), GB/T14048.5 (CCC approval)
Applicable Standards for Use	ISO12100-1, -2/EN12100-1, -2, IEC60204-1/EN60204-1, ISO11161/prEN11161 ISO10218/EN775, ANSI/RIA R15.06, ANSI B11.19
Operating Temperature	-25 to +60°C (no freezing) (without rubber boot, with silicon rubber boot) -10 to +60°C (no freezing) (with NBR/PVC polyblend rubber boot)
Relative Humidity	45 to 85% RH (no condensation)
Storage Temperature	-40 to +80°C (no freezing)
Pollution Degree	2 (inside panel, terminal side) 3 (outside panel, operator side)
Contact Resistance	50 mΩ maximum (initial value)
Insulation Resistance	Between live and dead metal parts: 100 MΩ minimum (500V DC megger) Between terminals of different poles: 100 MΩ minimum (500V DC megger)
Impulse Withstand Voltage	2.5 kV
Operating Frequency	1,200 operations per hour
Mechanical Durability	Position 1 → 2 → 1: 1,000,000 operations minimum Position 1 → 2 → 3 → 1: 100,000 operations minimum
Electrical Durability	100,000 operations minimum
Shock Resistance	Operating extremes: 150 m/s ² Damage limits: 1,000 m/s ²
Vibration Resistance	Operating extremes: 5 to 55 Hz, amplitude 0.5 mm Damage limits: 16.7 Hz, amplitude 1.5 mm
Terminal Style	Solder terminal
Applicable Wire	1 cable, 0.5 mm ² maximum
Terminal Soldering Heat Resistance	310 to 350 °C, 3 seconds maximum
Terminal Tensile Strength	20N minimum
Mounting Screw Recommended Tightening Torque	0.5 to 0.8 N·m
Degree of Protection	IP40 (without rubber boot) IP65 (with rubber boot) (IEC 60529)
Conditional Short-circuit Current	50A (250V) (Use 250V/10A fast-blow fuse for short-circuit protection.)
Direct Opening Force	60N minimum (monitor switch)
Direct Opening Action Stroke	1.7mm minimum (return monitor switch), 4.7mm minimum (depress monitor switch)
Operator Strength	500N minimum (when pressing the entire button surface)
Weight (approx.)	26g (without rubber boot) 30g (with rubber boot)

Operation Characteristics

Notes:

- When a rubber boot is used, the operating force depends on the operating temperature.
- The operating force to shift the switch from position 2 to position 3 can be changed. For details, contact IDEC.

Terminal Arrangement (Bottom View)

- 3-position switch (note): 2 contacts, terminal nos. between NO1 – C1, NO2 – C2
 - Button return monitor switch: 0 to 2 contacts, terminal nos. between 11 – 12, 21 – 22
 - Button depress monitor switch: 0 to 2 contacts, terminal nos. between 31 – 32, 41 – 42
- Note: Use NO and C terminals for OFF → ON → OFF 3-position switch (NC terminal is not used).

Dimensions

Without Rubber Boot

- M3 nuts are supplied with the HE2B enabling switch.

With Rubber Boot

- M3 nuts are installed in the rubber boot.

Mounting Hole Layout

- Mounting screw: Two M3 screws
- Length of mounting screw: Mounting panel thickness + 4 to 5 mm

All dimensions in mm.

Accessories

Replacement Rubber Boot

Material	Color	Part No.	Ordering No.	Package Quantity
Silicon Rubber	Y: yellow B: black	HE9Z-D2*	HE9Z-D2*PN10	10
NBR/PVC Polyblend	Gray	HE9Z-D2N1	HE9Z-D2N1PN10	

Note: Specify a rubber boot color code in place of * in the Ordering No.

- Can be installed on HE2B (without rubber boot)

HE2B Double Three-position Enabling Switches

⚠ Safety Precautions

- The enabling switches have been designed for industrial purposes. Use for residential, commercial, or lighting purposes may cause unwanted electromagnetic disturbances in which case the user may be required to take adequate mitigation measures. (IEC60947-1, Clause 5.3)
- In order to avoid electric shock or fire, turn the power off before installation, removal, wiring, maintenance, or inspection of the enabling switch.
- Do not assemble or modify the enabling switches and do not disable the enabling function. Otherwise, failure of accidents may occur.
- When using the enabling switch in a safety related part of a control system, use the enabling switch properly in accordance with the safety standards and regulations of the actual machine, system, and application, of the country or region where the enabling switch is used. Also, perform a risk assessment before using the enabling switch.
- Do not disable the safety function of the enabling switch by using tape, elastic band, or by disfiguring the rubber boot, otherwise the loss of enabling switch function may cause serious accidents.
- Perform a risk assessment in actual applications as strong force may be applied to the switch when depressed to position 3.
- Perform a risk assessment for the shape and structure of the part where the enabling switch is installed, to prevent unintended operation of the enabling switch. For example, an enabling switch protruding from the teach pendant may result in an unintended operation of the enabling switch.
- Strong force may be applied to a 3-position enabling switch when pressed to position 3. Provide sufficient strength to the part where 3-position enabling switches will be installed.
- Use wires of the proper size to meet voltage and current requirements, and solder the wires correctly according to the wiring instruction described below. If soldering is incomplete, the wire may heat during operation, causing a fire hazard.
- Do not apply excessive force to the enabling switch.
- Follow the wiring instructions mentioned in the instruction manual.

Instructions**Operating Instructions**

- The enabling switch permits machine operation only while the enabling switch is manually operated for robot teaching or other purposes in hazardous areas. Make sure that the control system is designed to activate the machine only when the enabling switch is at position 2 (3mm) operating travel.
- To achieve a high level of safety, connect the two contacts of the 3-position switch to a disparity detection circuit (e.g., safety relay module) (ISO 13849-1).
- Because two contacts are designed to operate independently, pressing the edge of a button turns on one contact earlier than the other contact, causing a delay in operation. To avoid this, always press the center of the button.
- The ridge on the bottom of rubber boot serves as a seal, and waterproof characteristics are attained when the ridge is tightly pressed to the mounting panel. When the mounting panel is bent and the ridge cannot be pressed to the panel, add a reinforcing rib to secure the boot to the mounting panel.
- The edge of rubber boot may stick out if excessive force is applied on the rubber boot. When such event is anticipated, it is recommended to embed the rubber boot in the mounting panel as shown in the figure below.

- Using enabling switches without rubber boots in an environment where foreign particles or dust exist may lead to malfunction. Order an optional rubber boot or add extra protection.
- The rubber boot may deteriorate depending on the operating environment and conditions. When the rubber boot is deformed or cracked, replace with new ones.

Installation Instructions

- Provide sufficient strength to the mounting panel. Insufficient strength of the mounting panel or excessive operating force may damage the enabling switch, resulting in electric shock or fire.

Wiring Instructions

- Applicable wire size: 0.5 mm² maximum × 1 pc.
- Solder the terminal at a temperature of 310 to 350°C within 3 seconds using a soldering iron. Sn-Ag-Cu type is recommended when using lead-free solder. Do not use flow or dip soldering.
- When soldering, take care not to touch the enabling switch with the soldering iron. Also ensure that no tensile force is applied to the terminal. Do not bend the terminal or apply excessive force to the terminal.
- Use non-corrosive liquid rosin as soldering flux.

HE3B ø16mm Rectangular Three-position Enabling Switches

Rectangular operator part with ø16 mm mounting for easy installation.

2-contact 3-position enabling switches ideal for installing in small teach pendants.

• See website for details on approvals and standards.

Operation Characteristics

Part A: Approx. 56N
Part B: Approx. 14N

Part A: Approx. 50N
Part B: Approx. 12N

Operating Force (reference value)
(without rubber boot)
(when part A or B is pressed)

■ : ON (closed)
□ : OFF (open)

Part A: Approx. 10N
Part B: Approx. 2N

Pressing (position 1 to 2 to 3)	→ NO1-C1 NO2-C2
Releasing (position 2 to 1)	← NO1-C1 NO2-C2
Releasing (position 3 to 1)	← NO1-C1 NO2-C2

Notes:

- When rubber boot is used, operating force depends on the operating temperature.
- The operating force to shift the switch from position 2 to position 3 can be changed. For details, contact IDEC.

Terminal Arrangement (Bottom View)

- 3-position switch (Note)
- 2 contacts
- Terminal No.: between NO1 and C1, between NO2 and C2
- Note: Use NO and C terminals for the 3-position switch of OFF → ON → OFF operation (NC terminal is not used).

Mounting Hole Layout

- Recommended tightening torque for locking ring: 0.68 to 0.88 N·m
- Use the locking ring wrench MT-001 for tightening.
- Note: To maintain waterproof property of the switch, do not drill through the anti-rotation hole in the mounting panel. When not providing a hole, cut off the anti-rotation projection from the rubber boot. When cutting off the projection, ensure not to make a hole in the rubber boot.

⚠ Safety Precautions

- The enabling switches have been designed for industrial purposes. Use for residential, commercial, or lighting purposes may cause unwanted electromagnetic disturbances in which case the user may be required to take adequate mitigation measures. (IEC60947-1, Clause 5.3)
- Do not assemble or modify the enabling switches and do not disable the enabling function. Otherwise, failure of accidents may occur.
- When using the enabling switch in a safety related part of a control system, use the enabling switch properly in accordance with the safety standards and regulations of the actual machine, system, and application, of the country or region where the enabling switch is used. Also, perform a risk assessment before using the enabling switch.
- Do not disable the safety function of the enabling switch by using tape, elastic band, or by disfiguring the rubber boot, otherwise the loss of enabling switch function may cause serious accidents.
- Perform a risk assessment in actual applications as strong force may be applied to the switch when depressed to position 3.
- Perform a risk assessment for the shape and structure of the part where the enabling switch is installed, to prevent unintended operation of the enabling switch. For example, an enabling switch protruding from the teach pendant may result in an unintended operation of the enabling switch.
- Strong force may be applied to a 3-position enabling switch when pressed to position 3. Provide sufficient strength to the part where 3-position enabling switches will be installed.
- Use wires of the proper size to meet voltage and current requirements, and solder the wires correctly according to the wiring instruction described below. If soldering is incomplete, the wire may heat during operation, causing a fire hazard.
- Do not apply excessive force to the enabling switch.
- Follow the wiring instructions mentioned in the instruction manual.

Instructions

Operating Instructions

- The enabling switch permits machine operation only while the enabling switch is manually operated for robot teaching or other purposes in hazardous areas. Make sure that the control system is designed to activate the machine only when the enabling switch is at position 2 (3mm) operating travel.
- To achieve a high level of safety, connect the two contacts of the 3-position switch to a disparity detection circuit (e.g., safety relay module) (ISO 13849-1).
- Because two contacts are designed to operate independently, pressing the edge of a button turns on one contact earlier than the other contact, causing a delay in operation. To avoid this, always press the center of the button.
- When an enabling switch with rubber boot is mounted in a hermetically-sealed control box, a large change in internal air pressure may cause the rubber boot to inflate and deflate, affecting the performance of the enabling switch. Check periodically to make sure that the enabling switch operates correctly.
- The edge of rubber boot may stick out if excessive force is applied on the rubber boot. When such event is anticipated, it is recommended to embed the rubber boot in the mounting panel as shown in the figure below.
- Using enabling switches without rubber boots in an environment where foreign particles or dust exist may lead to malfunction. Order an optional rubber boot or add extra protection.

Installation Instructions

- If the mounting panel is deformed, waterproof characteristics of the enabling switch with rubber boot cannot be achieved. Keep sufficient strength on the mounting panel.
- The rubber boot has a projection for positioning the enabling switch onto the mounting panel. To maintain waterproof characteristics of the switch, do not drill through the anti-rotation hole in the mounting panel. When not providing the hole, remove the anti-rotation projection from the rubber boot. When removing the projection, ensure not to make a hole in the rubber boot.
- Secure the flange part when tightening the locking ring so that the enabling switch does not rotate. When the enabling switch may rotate during operation, it is recommended to embed the switch in the mounting panel as shown below.

Wiring Instructions

- Applicable wire size: 0.5 mm² maximum × 1 pc.
- Solder the terminal at a temperature of 310 to 350°C within 3 seconds using a soldering iron. Sn-Ag-Cu type is recommended when using lead-free solder. Do not use flow or dip soldering.
- When soldering, take care not to touch the enabling switch with the soldering iron. Also ensure that no tensile force is applied to the terminal. Do not bend the terminal or apply excessive force to the terminal.
- Use non-corrosive liquid rosin as soldering flux.

HE5B \varnothing 16mm Round Three-position Enabling Switches

Round-shaped operator for \varnothing 16 mm mounting hole.

3-position enabling switch with two contacts, ideal for installing in small teaching pendants.

• See website for details on approvals and standards.

HE5B ϕ 16mm Round Three-position Enabling Switches

Grip Style Enabling Switch Housing

HE5B enabling switches can be installed in the HE9Z-GSH51 grip style enabling switch housing to be used as 3-position grip style enabling switches.

Part No.	Ordering No.	Package Quantity
HE9Z-GSH51	HE9Z-GSH51	1

Specifications

Applicable Standards	IEC/EN 60529 UL50
Operating Temperature	-25 to 60°C (no freezing)
Relative Humidity	45 to 85% RH (no condensation)
Storage Temperature	-40 to 80°C (no freezing)
Pollution Degree	3
Shock Resistance	Damage limits: 500 m/s ²
Vibration Resistance	Damage limits: 5 to 55 Hz, amplitude 0.5 mm
Electric Shock Protection Class	Class II (when using HE5B-M2P*)
Applicable Cable	Outside diameter ϕ 4.5 to 10 mm
Conduit Port Size	M16 (cable gland is supplied with the grip style enabling switch housing)
Degree of Protection	IP65 (with HE5B-M2P*) NEMA type 4X indoor use only (with HE5B-M2P*)
Weight (approx.)	65g (grip style enabling switch housing only)

- The above specifications are for the grip style enabling switch housing only. For enabling switch, see the HE5B specifications on **D-075**.
- The following switches can be installed on the grip style enabling switch housing to be used as hand-held switches.
 - AB6M pushbuttons (IP65, except for AB6M-V)
 - AS6M selector switches (IP65)
 - AS6M key selector switches (IP65)

Dimensions

HE9Z-GSH51

HE9Z-GSH51 + HE5B Construction

- Anti-rotation ring is not required when installing the HE5B enabling switch on the HE9Z-GSH51 grip style enabling switch housing. Use the locking ring only.

Mounting Bracket

Part No: HE9Z-GH1

All dimensions in mm.

Notes:

- The HE9Z-GSH51 grip style enabling switch housing does not include the HE5B enabling switch. The enabling switch must be ordered separately.
- The HE5B enabling switch must be installed and wired to the HE9Z-GSH51 grip style enabling switch housing by the user. For information on wiring, see the instruction sheet supplied with the HE9Z-GSH51.

⚠ Safety Precautions

- The enabling switches have been designed for industrial purposes. Use for residential, commercial, or lighting purposes may cause unwanted electromagnetic disturbances in which case the user may be required to take adequate mitigation measures. (IEC60947-1, Clause 5.3)
- Do not assemble or modify the enabling switches and do not disable the enabling function. Otherwise, failure of accidents may occur.
- When using the enabling switch in a safety related part of a control system, use the enabling switch properly in accordance with the safety standards and regulations of the actual machine, system, and application, of the country or region where the enabling switch is used. Also, perform a risk assessment before using the enabling switch.
- Do not disable the safety function of the enabling switch by using tape, elastic band, or by disfiguring the rubber boot, otherwise the loss of enabling switch function may cause serious accidents.
- Perform a risk assessment in actual applications as strong force may be applied to the switch when depressed to position 3.
- Perform a risk assessment for the shape and structure of the part where the enabling switch is installed, to prevent unintended operation of the enabling switch. For example, an enabling switch protruding from the teach pendant may result in an unintended operation of the enabling switch.
- Strong force may be applied to a 3-position enabling switch when pressed to position 3. Provide sufficient strength to the part where 3-position enabling switches will be installed.
- Operator strength is 250N. If the expected operating force exceeds 250N, use a separate actuator with a stopper.
- Use wires of the proper size to meet voltage and current requirements, and solder the wires correctly according to the wiring instruction described below. If soldering is incomplete, the wire may heat during operation, causing a fire hazard.
- Do not apply excessive force to the enabling switch.
- Follow the wiring instructions mentioned in the instruction manual.

Instructions

Operating Instructions

- The enabling switch permits machine operation only while the enabling switch is manually operated for robot teaching or other purposes in hazardous areas. Make sure that the control system is designed to activate the machine only when the enabling switch is at position 2 (3mm) operating travel.
- To achieve a high level of safety, connect the two contacts of the 3-position switch to a disparity detection circuit (e.g., safety relay module) (ISO 13849-1).
- Because two contacts are designed to operate independently, pressing the edge of a button turns on one contact earlier than the other contact, causing a delay in operation. To avoid this, always press the center of the button.
- When an enabling switch with rubber boot is mounted in a hermetically-sealed control box, a large change in internal air pressure may cause the rubber boot to inflate and deflate, affecting the performance of the enabling switch. Check periodically to make sure that the enabling switch operates correctly.
- The edge of rubber boot may stick out if excessive force is applied on the rubber boot. When such event is anticipated, it is recommended to embed the rubber boot in the mounting panel as shown in the figure below.
- Using enabling switches without rubber boots in an environment where foreign particles or dust exist may lead to malfunction. Order an optional rubber boot or add extra protection.

Installation Instructions

- If the mounting panel is deformed, waterproof characteristics of the enabling switch with rubber boot cannot be achieved. Keep sufficient strength on the mounting panel.

HE9Z-GSH51 Grip Style Enabling Switch Housing

• Recommended Tightening Torque

Parts for tightening	Torque
A Head and body	0.8 to 1.2 N·m
B Body and cable gland	2.7 ± 3.3 N·m
C Cable gland	2.7 ± 3.3 N·m

- The recommended tightening torques of B and C are for the supplied cable gland. When using another cable gland, refer to the tightening torque of the cable gland used.

Wiring Instructions

- Applicable wire size: 0.5 mm² maximum × 1 pc.
- Solder the terminal at a temperature of 310 to 350°C within 3 seconds using a soldering iron. Sn-Ag-Cu type is recommended when using lead-free solder. Do not use flow or dip soldering.
- When soldering, take care not to touch the enabling switch with the soldering iron. Also ensure that no tensile force is applied to the terminal. Do not bend the terminal or apply excessive force to the terminal.
- Use non-corrosive liquid rosin as soldering flux.

HE6B Rectangular Three-position Enabling Switches

3-position enabling switch with monitoring contacts—Smallest in its class.

⚠ Safety Precautions

- The enabling switches have been designed for industrial purposes. Use for residential, commercial, or lighting purposes may cause unwanted electromagnetic disturbances in which case the user may be required to take adequate mitigation measures. (IEC60947-1, Clause 5.3)
- Do not assemble or modify the enabling switches and do not disable the enabling function. Otherwise, failure of accidents may occur.
- When using the enabling switch in a safety related part of a control system, use the enabling switch properly in accordance with the safety standards and regulations of the actual machine, system, and application, of the country or region where the enabling switch is used. Also, perform a risk assessment before using the enabling switch.
- Do not disable the safety function of the enabling switch by using tape, elastic band, or by disfiguring the rubber boot, otherwise the loss of enabling switch function may cause serious accidents.
- Perform a risk assessment in actual applications as strong force may be applied to the switch when depressed to position 3.
- Perform a risk assessment for the shape and structure of the part where the enabling switch is installed, to prevent unintended opera-

tion of the enabling switch. For example, an enabling switch protruding from the teach pendant may result in an unintended operation of the enabling switch.

- Strong force may be applied to a 3-position enabling switch when pressed to position 3. Provide sufficient strength to the part where 3-position enabling switches will be installed.
- Use wires of the proper size to meet voltage and current requirements, and solder the wires correctly according to the wiring instruction described below. If soldering is incomplete, the wire may heat during operation, causing a fire hazard.
- Do not apply excessive force to the enabling switch.
- Follow the wiring instructions mentioned in the instruction manual.
- If multiple safety components are wired in series, the Performance Level to EN ISO 13849-1 will be reduced due to the restricted error detection under certain circumstance.
- The entire concept of the control system, in which the safety component is integrated, must be validated to EN ISO 13849-2.

Instructions

Operating Instructions

- The enabling switch permits machine operation only while the enabling switch is manually operated for robot teaching or other purposes in hazardous areas. Make sure that the control system is designed to activate the machine only when the enabling switch is at position 2 (3mm) operating travel.
- To achieve a high level of safety, connect the two contacts of the 3-position switch to a disparity detection circuit (e.g., safety relay module) (ISO 13849-1).
- Because two contacts are designed to operate independently, pressing the edge of a button turns on one contact earlier than the other contact, causing a delay in operation. To avoid this, always press the center of the button.
- When an enabling switch with rubber boot is mounted in a hermetically-sealed control box, a large change in internal air pressure may cause the rubber boot to inflate and deflate, affecting the performance of the enabling switch. Check periodically to make sure that the enabling switch operates correctly.
- If the mounting panel is deformed, waterproof characteristics of the enabling switch with rubber boot cannot be achieved. Keep sufficient strength on the mounting panel.
- The ridge on the bottom of rubber boot serves as a seal, and waterproof characteristics are attained when the ridge is tightly pressed to the mounting panel. When the mounting panel is bent and the ridge cannot be pressed to the panel, add a reinforcing rib to secure the boot to the mounting panel.
- The edge of rubber boot may stick out if excessive force is applied on the rubber boot. When such event is anticipated, it is recommended to embed the rubber boot in the mounting panel as shown in the figure below.

- The edge of rubber boot may stick out if excessive force is applied on the rubber boot. When such event is anticipated, it is recommended to embed the rubber boot in the mounting panel as shown in the figure below.

- Using enabling switches without rubber boots in an environment where foreign particles or dust exist may lead to malfunction. Order an optional rubber boot or add extra protection.

Installation Instructions

- If the mounting panel is deformed, waterproof characteristics of the enabling switch cannot be achieved. Keep sufficient strength on the mounting panel.

Wiring Instructions

- Applicable wire size: 0.5 mm² maximum × 1 pc.
- Solder the terminal at a temperature of 310 to 350°C within 3 seconds using a soldering iron. Sn-Ag-Cu type is recommended when using lead-free solder. Do not use flow or dip soldering.
- When soldering, take care not to touch the enabling switch with the soldering iron. Also ensure that no tensile force is applied to the terminal. Do not bend the terminal or apply excessive force to the terminal.
- Use non-corrosive liquid rosin as soldering flux.

Grip Style Three-position Enabling Switches

HE2G

Compact, light-weight grip switch provides a comfortable hold

(Monitor switch)

(Except some models)

• See website for details on approvals and standards.

	Model	Page
	HE2G	D-084
	HE1G-L	D-089

Select from a wide variety of models

Equipped with different control units for various use.

Compact design fits comfortably in the hand

The curved grip and small-size makes operation comfortable. The light-weight (approx. 140g, HE2G-21SH) and compact size is suitable for operators with small hands and for use in tight working environments.

3-position switch with distinctive tactile feedback

Tactile clicking feedback allows easy recognition of switch operation when shifting from position 1 (contact OFF) to position 2 (contact ON).

Dual enabling contacts ensure a high level of safety

Dual enabling contacts with a separate actuator for each contact is IDEC's original design. This ensures a higher safety level. Disparity detection of category 4 (ISO 13849-1) can be achieved by using this switch with a safety relay module or a safety controller.

Actuators with plastic holders, applicable for HS5 series interlock switches, can be used with the HE2G

Example of automatic and manual operation modes when HS5 is used

Automatic mode

Manual mode

Handstrap (optional)
HG9Z-PS1

Operation modes can be changed by inserting/removing the actuator with plastic holder installed to the HE2G into the HS5D. When the actuator is inserted, the operation is in automatic mode. When the actuator is removed, the operation is in manual mode.

HE2G Grip Style Three-position Enabling Switches

New compact, light-weight grip style enabling switch provides a comfortable hold

HE2G

3-Position Switch	Monitor Switch	Contact Configuration				Rubber Boot Material / Color	Wiring Style	Part No.

Terminal Tensile Strength	20N minimum
Degree of Protection	Without switch/pilot light IP67/66 With switch/pilot light IP65
Conditional Short-circuit Current	50A (250V) (Use 250V/10A fast-blow fuse for short circuit protection.)
Direct Opening Force	60N minimum (monitor switch)
Operator Strength	500N minimum (when pressing the entire button surface)
Free Fall	1.0m 1 fall (IEC 60068-2-32 compliant)
Weight (approx.)	HE2G-21SH: 140g HE2G-21SH-P-0/-21SC: 145g HE2G-21SHE/-21SC-P-0: 150g HE2G-21SH-L-L/-21SHE-P-0/-21SCE: 155g HE2G-21SH-L-K/-21SCE-P-0: 160g HE2G-21SHE-L-L/-21SC-L-L: 165g HE2G-21SHE-L-K/-21SC-L-K: 170g HE2G-21SCE-L-L: 175g HE2G-21SCE-L-K: 180g

Operation Characteristics

- Terminals N01-C1/A1-B1, N02-C2/A3-B3 are outputs of the 3-position enabling switch.
- The above operation characteristics show when the center of the grip style enabling switch button is pressed. Because two contacts are designed to operate independently, pressing the edge of the button turns on one contact earlier than the other contact, causing a delay in operation. To avoid this, always press the center of the button.

- For solder terminal type terminal arrangement of each switch/pilot light, see each catalog.

HE2G Grip Style Three-position Enabling Switches

 Safety Precautions

- The enabling switches have been designed for industrial purposes. Use for residential, commercial, or lighting purposes may cause unwanted electromagnetic disturbances in which case the user may be required to take adequate mitigation measures. (IEC60947-1, Clause 5.3)
- Do not assemble or modify the enabling switches and do not disable the enabling function. Otherwise, failure of accidents may occur.
- When using the enabling switch in a safety related part of a control system, use the enabling switch properly in accordance with the safety standards and regulations of the actual machine, system, and application, of the country or region where the enabling switch is used. Also, perform a risk assessment before using the enabling switch.
- Do not hold the enabling switch to position 2 using tapes or strings. Otherwise the loss of enabling switch function may cause serious accidents.
- Do not use with the grip switch installed on a machine.
- Use wires of the proper size to meet voltage and current requirements.
- Do not apply excessive force to the enabling switch.
- Make sure that dust, water and oil do not enter the grip switch during wiring.
- Be sure to choose cables according to the operating environment.
- If multiple safety components are wired in series, the Performance Level to EN ISO 13849-1 will be reduced due to the restricted error detection under certain circumstance.
- The entire concept of the control system, in which the safety component is integrated, must be validated to EN ISO 13849-2.

Instructions

Operating Instructions

- This grip style three-position enabling switch is a device used for enabling a machine such as robots when teaching the machine in a hazardous area manually. Configure the enabling system so that the machine can operate when the switch is in position 2 and an separate start switch is required to initiate the system.
- To achieve a high level of safety, connect the two contacts of the 3-position switch to a disparity detection circuit (terminal No. N01-C1 and N02-C2) to a discrepancy detection circuit such as a safety relay module. (ISO13849-1/ EN954-1)
- The base and the plastic part of rubber boot frame are made of glass-reinforced ABS/PBT. The rubber boot is made of silicone rubber or NBR/PVC polyblend. The screw is made of iron. When cleaning the grip style three-position enabling switch, use a detergent compatible with the materials.
- When adding momentary pushbutton switch and key selector switch, do not connect NO and NC contacts of a microswitch to different voltages or different power sources to prevent a dead short-circuit.
- When operating a additionally installed key selector switch, be sure to fully insert the key. Otherwise, failure may occur.
- The rubber boot may deteriorate depending on the operating environment and conditions. When the rubber boot is deformed or cracked, replace with new ones.

Wiring Instructions

- Solder the terminal at a temperature of 310 to 350°C within 3 seconds using a soldering iron. Sn-Ag-Cu type is recommended when using lead-free solder. Do not use flow or dip soldering.
- When soldering, take care not to touch the enabling switch with the soldering iron. Also ensure that no tensile force is applied to the terminal. Do not bend the terminal or apply excessive force to the terminal.
- Use non-corrosive liquid rosin as soldering flux.
- Because the terminal spacing is narrow, use protective tubes or heat shrinkable tubes to avoid burning of wire coating or short circuit.
- When using a stranded wire, make sure that adjoining terminals are not short-circuited
- with protruding core wires.
- Use copper Wire 60/75 degree C only. (UL508)
- The wiring has to be installed according to GS-ET-22, 4.2.6.

Instructions

Solder Terminal

Wire Length inside the Switch

	Grip Style Enabling Switch								Momentary Pushbutton/ Key Selector Switch			Emergency Stop Switch		Pilot Light	
	N01	C1	11	12	31	32	N02	C2	C	NO	NC	1	2	+	-
Wire stripping length L1 (mm)	40	45	50	60	50	60	85	80	120			110		115	
Wire stripping length L2 (mm)	L2=5mm														

Applicable Wire Size

0.5mm² maximum (Observe the requirements of IEC 60204-1 for wiring.)

Recommended Tightening Torque

Parts for tightening		Torque
A	Base and rubber kit (M4 screw × 4)	1.1 to 1.3 N·m
B	Cable gland and grip style enabling switch	2.7 to 3.3 N·m
C	Cable gland	2.7 to 3.3 N·m
D	HE2B Enabling Switch (M3 screws × 2) *	0.5 to 0.8 N·m

Note: The recommended tightening torques of B and C are for the supplied cable gland. When using another cable gland, refer to the tightening torque of the cable gland used.

* For replacing HE2B enabling switch or rubber boot only

mended connector is used. When using another connector, refer to the specifications of the connector used.

Connector Terminal

Wire Length inside the Switch

	Grip Style Enabling Switch	Momentary Pushbutton/Key Selector Switch	Emergency Stop Switch
Wire stripping length L1 (mm)	20	60	75

Applicable wire size for the cable gland on cable side

- 0.05 to 0.86mm² (AWG18 to 30): Check the compliance with receptacle and contact.

Tool: 1762846-1 (manual tool)

Note: When using stranded wires, make sure that loose wires do not cause short circuit. Also, do not solder the terminals to prevent loose wires. Use copper wire of 60°C or 75°C temperature rating in order to comply with UL508. Observe the requirements of GS-ET-22: 2003, 4.2.6 for wiring.

HE1G-L Grip Style Three-position Enabling Switches

The distinctive tactile feedback makes it easy to know the current position of the switch.
Light operating force ideal for long-hour operation

- Ergonomically-designed OFF-ON-OFF operation.
- The switch does not turn ON when being released from position 3 (OFF when pressed) to position 1 (OFF when released) (IEC 60204-1, 9.2.5.8).
- Two contacts are provided so that even if one contact fails due to welding or short-circuit, the other contact can disable machine operation.
- Monitor switch is direct opening action.
- The distinctive tactile feedback when shifting to position 2 (enabling position) makes it easier to know where the enabling switch is currently positioned—position 1 (OFF), 2 (ON), or 3 (OFF).
- Lighter operating force on position 2 assures more comfortable, stress-free operation when operating long hours.
- Emergency stop switch and momentary pushbutton versions are available.
- Push-in terminal models can be selected.
- IP66 degree of protection (HE1G-L21SM)

HE1G-L

Package Quantity: 1

Contact Configuration			Rubber Boot	Wiring Style	Part No.
3-position Switch	Monitor Switch	Additional Pushbutton Switch			
2 contacts	With (1NC)	Without	Silicon Rubber / yellow (Note 1) NBR/PVC Polyblend / gray (Note 2)	Push-in terminal	HE1G-L21SM HE1G-L21SM-1N
		Momentary Pushbutton Switch (1NO: AB6M-M1PB)	Silicon Rubber / yellow NBR/PVC Polyblend / gray		HE1G-L21SMB HE1G-L21SMB-1N
		Emergency Stop Switch (2NC: HA1E-V2S2R)	Silicon Rubber / yellow NBR/PVC Polyblend / gray		HE1G-L20ME HE1G-L20ME-1N
	Without	Momentary Pushbutton Switch (2NO: AB6M-M2PB)	Silicon Rubber / yellow NBR/PVC Polyblend / gray		HE1G-L20MB HE1G-L20MB-1N

Note 1: Silicon rubber: Can be used in general factories. Remains flexible at cold temperatures. Suitable to applications in a wide operating temperature range.
Note 2: NBR/PVC polyblend: Oil-proof. Suitable for environments subjected to machine oil and painting robot where silicon rubber cannot be used.

Contact Resistance	100 mΩ maximum (initial value)
Insulation Resistance	Between live and dead metal parts: 100 MΩ minimum (500V DC megger) Between terminals of different pole: 100 MΩ minimum (500V DC megger)
Impulse Withstand Voltage	Screw terminal: 2.5 kV (momentary pushbuttons: 1.5 kV) Internal connector: 1.5 kV
Electric Shock Protection Class	Class II (IEC 61140)
Operating Frequency	1,200 operations per hour
Mechanical Durability	Position 1 → 2 → 1: 1,000,000 operations minimum Position 1 → 2 → 3 → 1: 100,000 operations minimum
Electrical Durability	100,000 operations minimum (rated load) 1,000,000 operations minimum (24V AC/DC, 100 mA)
Shock Resistance	Operating extremes: 150 m/s ² Damage limits: 1,000 m/s ²
Vibration Resistance	Operating extremes: 5 to 55 Hz, amplitude 0.5 mm minimum Damage limits: 16.7 Hz, amplitude 1.5 mm minimum
Applicable Wire	Push-in terminal: 0.2 to 1.5 mm ² (AWG16 to 25)
Applicable Cable	Outside diameter ø7 to 13 mm
Conduit Port Size	M20 (cable gland is supplied with the grip style enabling switch)
Terminal Tensile Strength	20N minimum
Degree of Protection	HE1G-L21SM: IP66 (IEC 60529) HE1G-L20ME: IP65 (IEC 60529) HE1G-L20MB: IP65 (IEC 60529) HE1G-L21SMB: IP65 (IEC 60529)
Conditional Short-circuit Current	50A (250V) (Use 250V/10A fast-blow fuse for short circuit protection.)
Direct Opening Force	70N minimum (monitor switch)
Operator Strength	500N minimum (when pressing the entire button surface)
Weight (approx.)	HE1G-L21SM: 195g HE1G-L21SMB/L20MB: 205g HE1G-L20ME: 210g

Operating Characteristics

HE1G-L21SM, HE1G-L21SM-1N

- Terminals 1-2 and 3-4 are outputs of the 3-position enabling switch.
- Terminals 5-6/A3-B3 are outputs of the monitor switch.
- The above operation characteristics show when the center of the grip style enabling switch button is pressed. Because two contacts are designed to operate independently, pressing the edge of the button turns on one contact earlier than the other contact, causing a delay in operation. To avoid this, always press the center of the button.

Dimensions

HE1G-L21SM, HE1G-L21SM-1N

Cable Gland (supplied with grip style enabling switch)
Part No.: SKINTOP BS-M20 x 1.5 (LAPP)

Accessory

Mounting Bracket HE9Z-GH1 (for hanging the switch)

Note: Available for HE1G/HE1G-L/HE9Z-GSH51 only.

HE1G-L Grip Style Three-position Enabling Switches

⚠ Safety Precautions

- The enabling switches have been designed for industrial purposes. Use for residential, commercial, or lighting purposes may cause unwanted electromagnetic disturbances in which case the user may be required to take adequate mitigation measures. (IEC60947-1, Clause 5.3)
- Do not assemble or modify the enabling switches and do not disable the enabling function. Otherwise, failure of accidents may occur.
- When using the enabling switch in a safety related part of a control system, use the enabling switch properly in accordance with the safety standards and regulations of the actual machine, system, and application, of the country or region where the enabling switch is used. Also, perform a risk assessment before using the enabling switch.
- Do not hold the enabling switch to position 2 using tapes or strings. Otherwise the loss of enabling switch function may cause serious accidents.
- Do not use with the grip switch installed on a machine.
- Use wires of the proper size to meet voltage and current requirements.
- Do not apply excessive force to the enabling switch.
- Make sure that dust, water and oil do not enter the grip switch during wiring.
- Be sure to choose cables according to the operating environment.
- If multiple safety components are wired in series, the Performance Level to EN ISO 13849-1 will be reduced due to the restricted error detection under certain circumstance.
- The entire concept of the control system, in which the safety component is integrated, must be validated to EN ISO 13849-2.

Instructions**Operating Instructions**

- This grip style three-position enabling switch is a device used for enabling a machine such as robots when teaching the machine in a hazardous area manually. Configure the enabling system so that the machine can operate when the switch is in position 2 and an separate start switch is required to initiate the system.
- To achieve a high level of safety, connect the two contacts of the 3-position switch to a disparity detection circuit (terminal No. N01-C1 and N02-C2) to a discrepancy detection circuit such as a safety relay module. (ISO13849-1/ EN954-1)
- The base and the plastic part of rubber boot frame are made of glass-reinforced ABS/PBT. The rubber boot is made of silicone rubber or NBR/PVC polyblend. The screw is made of iron. When cleaning the grip style three-position enabling switch, use a detergent compatible with the materials.
- The rubber boot may deteriorate depending on the operating environment and conditions. When the rubber boot is deformed or cracked, replace with new ones.

Wiring Instructions**Push-in Terminal Type****Wire Length inside the Grip Style Enabling Switch**

	Terminal No. 1-4	Terminal No. 5-8
Wire stripping length L1, L2 (mm)	L1 = 35 mm	L2 = 30 mm
Wire stripping length L3 (mm)	L3 = 8 to 9 mm	

**Applicable Wire Size**

<Direct wiring>

0.2 to 1.5 mm² (one wire per terminal)

Note: When using stranded wire, make sure that adjoining terminals are not short-circuited by frayed wires. Also, do not solder the wires to avoid frayed wires.

<Ferrules>

Recommended ferrules (Phoenix Contact)

Part No.	Applicable Wire
S3TL-H025-12WJ	0.25mm ²
S3TL-H034-12WT	0.34mm ²
S3TL-H05-14WA	0.5mm ²
S3TL-H075-14WW	0.75mm ²

Crimping tool: PZ6 Roto L

Recommended Tightening Torque

Parts for Tightening		Torque
A	Rubber boot and the base (M4 screw × 3)	1.2 ± 0.1 N·m
B	Connector and grip style enabling switch	4.0 ± 0.3 N·m
C	Connector and connector	4.0 ± 0.3 N·m
D	Do not remove screws	—

The torque of screws B and C in the table above are values when the recommended connector is used. When using another connector, refer to the specifications of the connector used.

Actuator with Plastic Holder

HS5 series interlock switches detect the installation/removal of grip style enabling switches.

- The actuator with plastic holder for the HS5 series interlock switches can be installed onto the HE1G/HE1G-L/HE2G grip style enabling switches easily using the two mounting screws supplied with the actuator.
- Inserting the actuator on the grip style enabling switch into the entry slot of HS5D/HS5B/HS5E/HS5E-K interlock switch, the grip style enabling switch can be retained firmly in position.
- Using with HS5E/HS5E-K interlock switches prevent unauthorized removal of grip style enabling switches.
- Easy switching by removing/installing the grip style enabling switches can be achieved by designing the circuit to initiate automatic or manual operation when the interlock switch is installed or removed, respectively.

Actuator with Plastic Holder

Specifications

Applicable Model	HE1G/HE1G-L/HE2G Grip Style Enabling Switch HS5D/HS5B/HS5E/HS5E-K Interlock Switch
Mechanical Durability	10,000 operations
Weight (approx.)	30g

Note: Refer to the specifications of HE1G/HE1G-L/HE2G grip style enabling switches and HS5D/HS5L/HS5E/HS5E-K interlock switches.

Description	Part No.
Actuator with plastic holder for HE1G/HE1G-L/HE2G	HE9Z-GP15

Note: The HE1G/HE1G-L/HE2G grip style enabling switches and HS5 series interlock switches are ordered separately.

Dimensions

Instructions

Mounting

① The HE9Z-GP15 and the HE1G/HE1G-L are installed as shown in the following figure.

② Secure the actuator using the attached two screws in the direction of the arrow as shown in the following figure.

- Using the attached screws (M4 self-tapping screw × 2), secure the HE9Z-GP15 to the grip style enabling switch. Recommended tightening torque: 1.0 ±0.1 N·m. Do not use excessive force to tighten the HE9Z-GP15 onto the switch, otherwise the mounting holes will become deformed and the HE9Z-GP15 cannot be secured. Prevent the screws from loosening by applying epoxy. (Recommended: LOCTITE 425, ThreeBond 1401)

Precautions for Installation

- When using the HE9Z-GP15 for safety-related equipment in a control system, refer to safety standards and regulations in each country and region to make sure of correct operation. Also, perform a risk assessment to ensure safety before starting operation of the machine.
- Read the instruction sheets for both the grip style enabling switch and interlock switch to be used.
- Insert the HE9Z-GP15 in the direction shown in the following figure only. Do not insert from any other direction. Also, do not use the slot plug attached to the interlock switch.

- See below for vertical installation. Do not install in any other direction. Also, make sure that the mounting surface is provided for the entire area of the grip style enabling switch, so that the switch does not tilt as shown below. Otherwise the HE9Z-GP15 actuator will be deformed.

- Do not install the grip style enabling switch and the interlock switch in an area subjected to vibration. Excessive vibration may cause malfunction of the switch contacts of the grip style enabling switch. Also, exposure to vibration for a long period of time can cause scratching and deformation of plastic parts.
- When installing or removing the grip style enabling switch, do not use excessive force in any direction other than shown in the following figure. Otherwise the HE9Z-GP15 actuator can become deformed or damaged.

- Make sure that the HE9Z-GP15 actuator is inserted completely into the interlock switch. Avoid any foreign objects between the actuator and interlock switch as they may interfere with the plastic spring, resulting in possible damage to the actuator.

- When manually unlocking the HS5L interlock switch attached to the grip style enabling switch, bend the spiral part of the connector slightly to be able to access the manual unlock key.

- Do not apply excessive shocks to the HE9Z-GP15 when attached to the interlock switch, otherwise the actuator may be removed from the interlock switch. Also excessive shocks may result in damage or failure of the interlock switch.
- When the plastic part of the HE9Z-GP15 or the actuator is damaged or deformed, stop using immediately.
- The HE9Z-GP15 is used for HE1G/HE1G-L/HE2G grip style enabling switch and HS5D/HS5B/HS5L/HS5E-K interlock switches only. Do not use the HE9Z-GP15 for other products.
- Do not modify or disassemble the HE9Z-GP15.

Ordering Terms and Conditions

Thank you for using IDEC Products.

By purchasing products listed in our catalogs, datasheets, and the like (hereinafter referred to as "Catalogs") you agree to be bound by these terms and conditions. Please read and agree to the terms and conditions before placing your order.

1. Notes on contents of Catalogs

- (1) Rated values, performance values, and specification values of IDEC products listed in this Catalog are values acquired under respective conditions in independent testing, and do not guarantee values gained in combined conditions.
Also, durability varies depending on the usage environment and usage conditions.
- (2) Reference data and reference values listed in Catalogs are for reference purposes only, and do not guarantee that the product will always operate appropriately in that range.
- (3) The specifications / appearance and accessories of IDEC products listed in Catalogs are subject to change or termination of sales without notice, for improvement or other reasons.
- (4) The content of Catalogs is subject to change without notice.

2. Note on applications

- (1) If using IDEC products in combination with other products, confirm the applicable laws / regulations and standards.
Also, confirm that IDEC products are compatible with your systems, machines, devices, and the like by using under the actual conditions. IDEC shall bear no liability whatsoever regarding the compatibility with IDEC products.
- (2) The usage examples and application examples listed in Catalogs are for reference purposes only. Therefore, when introducing a product, confirm the performance and safety of the instruments, devices, and the like before use. Furthermore, regarding these examples, IDEC does not grant license to use IDEC products to you, and IDEC offers no warranties regarding the ownership of intellectual property rights or non-infringement upon the intellectual property rights of third parties.
- (3) When using IDEC products, be cautious when implementing the following.
 - i. Use of IDEC products with sufficient allowance for rating and performance
 - ii. Safety design, including redundant design and malfunction prevention design that prevents other danger and damage even in the event that an IDEC product fails
 - iii. Wiring and installation that ensures the IDEC product used in your system, machine, device, or the like can perform and function according to its specifications
- (4) Continuing to use an IDEC product even after the performance has deteriorated can result in abnormal heat, smoke, fires, and the like due to insulation deterioration or the like. Perform periodic maintenance for IDEC products and the systems, machines, devices, and the like in which they are used.
- (5) IDEC products are developed and manufactured as general-purpose products for general industrial products. They are not intended for use in the following applications, and in the event that you use an IDEC product for these applications, unless otherwise agreed upon between you and IDEC, IDEC shall provide no guarantees whatsoever regarding IDEC products.
 - i. Use in applications that require a high degree of safety, including nuclear power control equipment, transportation equipment (railroads / airplanes / ships / vehicles / vehicle instruments, etc.), equipment for use in outer space, elevating equipment, medical instruments, safety devices, or any other equipment, instruments, or the like that could endanger life or human health
 - ii. Use in applications that require a high degree of reliability, such as provision systems for gas / waterworks / electricity, etc., systems that operate continuously for 24 hours, and settlement systems
 - iii. Use in applications where the product may be handled or used deviating from the specifications or conditions / environment listed in the Catalogs, such as equipment used outdoors or applications in environments subject to chemical pollution or electromagnetic interference
If you would like to use IDEC products in the above applications, be sure to consult with an IDEC sales representative.

3. Inspections

We ask that you implement inspections for IDEC products you purchase without delay, as well as thoroughly keep in mind management/maintenance regarding handling of the product before and during the inspection.

4. Warranty

(1) Warranty period

The warranty period for IDEC products shall be one (1) year after purchase or delivery to the specified location. However, this shall not apply in cases where there is a different specification in the Catalogs or there is another agreement in place between you and IDEC.

(2) Warranty scope

Should a failure occur in an IDEC product during the above warranty period for reasons attributable to IDEC, then IDEC shall replace or repair that product, free of charge, at the purchase location / delivery location of the product, or an IDEC service base. However, failures caused by the following reasons shall be deemed outside the scope of this warranty.

- i. The product was handled or used deviating from the conditions / environment listed in the Catalogs
 - ii. The failure was caused by reasons other than an IDEC product
 - iii. Modification or repair was performed by a party other than IDEC
 - iv. The failure was caused by a software program of a party other than IDEC
 - v. The product was used outside of its original purpose
 - vi. Replacement of maintenance parts, installation of accessories, or the like was not performed properly in accordance with the user's manual and Catalogs
 - vii. The failure could not have been predicted with the scientific and technical standards at the time when the product was shipped from IDEC
 - viii. The failure was due to other causes not attributable to IDEC (including cases of force majeure such as natural disasters and other disasters)
- Furthermore, the warranty described here refers to a warranty on the IDEC product as a unit, and damages induced by the failure of an IDEC product are excluded from this warranty.

5. Limitation of liability

The warranty listed in this Agreement is the full and complete warranty for IDEC products, and IDEC shall bear no liability whatsoever regarding special damages, indirect damages, incidental damages, or passive damages that occurred due to an IDEC product.

6. Service scope

The prices of IDEC products do not include the cost of services, such as dispatching technicians. Therefore, separate fees are required in the following cases.

- (1) Instructions for installation / adjustment and accompaniment at test operation (including creating application software and testing operation, etc.)
- (2) Maintenance inspections, adjustments, and repairs
- (3) Technical instructions and technical training
- (4) Product tests or inspections specified by you

The above content assumes transactions and usage within your region. Please consult with an IDEC sales representative regarding transactions and usage outside of your region. Also, IDEC provides no guarantees whatsoever regarding IDEC products sold outside your region.
